AeroDocs is the new paradigm in airline document management, marking a technology shift in compliance, collaboration and usability.

FAQs
Arconics Connected Aircraft Platform

Q: What is an airline Document Management System (DMS)?

A: AeroDocs makes it easy for airlines to manage the many documents that are integral to the operation of the airline, meeting compliance and safety requirements. From aircraft manuals to flight briefings, a modern airline has very demanding document management needs. AeroDocs meets those needs at enterprise level, with a complete, connected solution that enables XML authoring, document distribution, synchronisation, tracking and delivery to the world's best document viewer for pilots.

Q: What is an Electronic Flight Bag (EFB)?

A: AeroDocs EFB is the world's leading Electronic Flight Bag solution. It combines an intuitive Viewer with powerful document search and annotations features. All the documentation that a pilot needs can now live on an iPad or other portable device. This reduces the clutter in the cockpit, reduces the weight to be carried by the aircraft and makes it easy for flight crew to find the information they need quickly and efficiently.

Q: What is a wireless In-Flight Entertainment (IFE) platform?

A: In the not-so-good old days, air passengers squinted at a distant screen or had access to a limited selection of content on a seat-back screen. Today, wireless IFE lets passengers use their own mobile device - smartphone or tablet - to access a wide range of content, streamed wirelessly from a central platform. Wireless IFE also delivers destination content and enables access to in-flight shopping and premium content, allowing airlines to boost their ancillary revenues. CloudStore Wireless IFE by Arconics is a robust wireless IFE platform that comfortably meets the needs of passengers and cabin crew, delivering pleasurable flight experiences and additional scope for revenue generation.

Q: Is all Arconics software developed in-house?

A: Absolutely. We don't supply any software that's been developed by third parties. Our clients can be assured that we've written all the code that goes into their solutions. We can tailor our products to any airline's needs and we keep on top of software innovations, updates and quality control.

Q: Which airlines use Arconics software?
A: Some of the world's best and most successful airlines use Arconics software. We're delighted to include Ryanair, Qatar Airways, Aer Lingus and Cathay Pacific on our growing client list.

Q: What is a Connected Aircraft Platform? What do you mean when you say 'Arconics software connects everyone onboard an aircraft'?
A: Arconics has developed and built a connected aircraft platform through which all our software applications communicate. From pilots to cabin crew to passengers, all share data through our platform, guaranteeing connectivity, a seamless experience in nose-to-tail communications and intelligent data management. We also make it easy for ground operations to deliver content and documents to the aircraft.

Q: My airline already has elements of the connected aircraft platform in place. Can these systems be integrated into the Arconics platform?
A: Yes. The Arconics Connected Aircraft Platform is designed to be flexible and adaptable and to work around your airline's needs, today and into the future. Tell us what you have and what you need and we'll demonstrate the power of our platform.

Q: I'm interested in finding out more about Arconics software. What should I do next?
A: We'd love to find out more about your needs so that we can arrange a demo or a trial of our world-leading connected aircraft platform and airline software apps. You can call or email us. We look forward to connecting everyone onboard your aircraft fleet.
